**Bold. Conservation.**  
Faucets. Showerheads. Toilets.

THE BOLD LOOK  
OF **KOHLER.**

# Bold. Conservation.

Faucets. Showerheads. Toilets.

## Saving Water. And You.

As a global concern, conserving water affects us all.

### Why conserve water?

Perhaps you've been fortunate enough to live in a water-rich environment and haven't yet felt the impact of increasing water shortages, and you're wondering what water conservation can possibly have to do with you. For starters, we know that:

- Less than 1% of the world's freshwater supply is accessible for human use
- By the year 2013, at least 36 states in the U.S. anticipate local, regional or statewide water shortages
- Toilets account for 25% of daily indoor water use in U.S. homes

## Simple Savings. 39,000 gallons.

Just by using water-efficient plumbing products, the average American can reduce his or her daily water use from 70 to 43 gallons. A family of four would save **39,000 gallons of water per year.** That's equivalent to:

-  2000 showers
- or -
-  a lifetime of drinking water for three people
- and -
-  hundreds of dollars off your water bill

## Three easy ways to embrace conservation without reservation.

- 1.** Choose Faucets with Water-Saving Aerators and save more than 14,700 gallons of water each year.

- 2.** Use Water-Conserving Showerheads or Handshowers and save over 7700 gallons of water each year.

- 3.** Install High-Efficiency Toilets (HET) and save up to 16,500 gallons of water each year.

NOTE: Based on average usage of a household of four.
